## **TO WHOM IT MAY CONCERN**

### **Letter of recommendation for André Geldenhuys**

André Geldenhuys has been involved in a surface geological survey conducted for Occidental Petroleum in the waters around Bahrain.

The survey was conducted during November and December of 2008, during which time hundreds of sampler modules were installed into the sea-bed and later retrieved.

André was attached to the project as a diver, and as such did a very dedicated, competent and safe piece of work. However, weXco's supervisors on the project were particularly appreciative of André's skills as an organizer during the times where our logistics provider failed them. Much of the time André has handled jobs like provision of personnel, accommodation and supplies, and acted as paymaster, cook etc. for a 12 man crew in addition to his diver job. It is my supervisor's firm opinion that the survey would have ground to a halt without André.

As such I have no hesitation whatsoever in recommending André for jobs in which his multiple skills can be utilized.

Regards,

Peter Willumsen, Director
